## DETAILED ACTION

### *Election/Restriction*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21-28 and 36-39 are drawn to an information reproducing system characterized by a region dividing means.
- II. Claims 29-32 are drawn to an information reproducing system characterized by means to replace a minimum value of one of the previous fields.
- III. Claims 40-41 are drawn to an information recording apparatus characterized by at least two types of reference dots having at least different areas of shapes.
- IV. Claim 42-43 are drawn to an information recording apparatus characterized by a density selection/adjustment means.

Inventions I-III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if at least one subcombination is separately usable. In the instant case, each invention has separate utility such as operating either independently or in combination with other subcombinations according the claimed limitations, without requiring the limitations which uniquely characterize the other invention(s), as indicated above. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above, requiring separate consideration and search, restriction for examination purposes as indicated is proper.

Art Unit: 2724

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other inventions.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
